

Rafi Solichin

Full-stack Developer | Software Engineer | AI Enthusiast

+62 81381140105 ; rafisolichin@gmail.com ; Kota Serang, Banten, 42118 ; soluchin.github.io/portofolio

SUMMARY

Full-stack .NET Developer with 4 years of experience building web and cross-platform applications using .NET, React, and Flutter. Specialized in developing scalable REST APIs, optimizing SQL queries, and integrating complex systems and third-party services. Experienced in designing backend architecture, working with database-driven systems, and deploying applications using Docker in Linux environments. Hands-on experience with cloud services including AWS (EC2, S3, RDS) and CI/CD pipelines using Jenkins.

Currently expanding expertise in cloud technologies and system design, with a strong interest in evolving towards cloud engineering and software architecture roles.

EXPERIENCE

Software Engineer Associate

At PT. Ilab Solusi Pratama

May 2024 - Present

- Developed new features and maintained legacy code ERP systems for hospital clients using C# ASP.NET MVC, supporting operational workflows and data management.
- Maintained and optimized .Net MVC apps with front-end JavaScript with jQuery and AJAX.
- Designed RESTful APIs for external integrations.
- Research and integrate third-party services including Advertising API, Google SSO (OAuth) and payment gateways.

Freelance - Fullstack Web Developer

Client : Unisma Bekasi

Apr 2024 - Oct 2024

- Built payroll management system using NestJS, handling salary calculations, deductions, and employee data.
- Designed backend architecture and database schema for payroll processing.
- Deployed application using Docker on on-premise server with reverse proxy setup (Nginx).
- Gather and translated client requirements into technical solutions.

Data Engineer

At Nawa data Solusindo

Sep 2023 - Mar 2024

- Optimized SQL procedures for data processing and reporting.
- Analyzed user requirements and translated them into data solutions.
- Identified and resolved data integrity issues to improve system reliability.

Backend Developer & Trainer

At Kodehive Technology & Academy

Sep 2022 - Sep 2023

- Developed backend services using C# and .NET for various applications.
- Deployed applications using Docker and Linux-based environments.
- Introduced microservices concepts and caching using Redis.
- Delivered training sessions on backend development and system architecture.

Trainer - Docker and Kubernetes fundamental

At Trainocate

Dec 2023

- Delivered training on containerization concepts, Docker image/container lifecycle, and Kubernetes cluster management including auto-scaling and inter-service networking.

Trainer - Mobile Apps Development with Flutter

At Polytechnic Gajah Tunggal

Dec 2022 - Feb 2023

- As a trainer, I have responsibility to deliver the process of mobile apps development. Starting from the introduction of dart programming, creating user interfaces, layouts, navigation and routing, data management, state management such as riverpod, GetX and BLoC, networking, http requesting and how to CRUD to the server-side using Flutter.

Trainer - Oracle SQL Fundamental I

At Trainocate

Nov 2022

- Conducted SQL fundamentals training covering queries, joins, and database operations for professional participants.

Database Engineer

At DSITD IPB University

Jul - Aug 2021

- ETL Data Transformation.
- Visualize data and make a dashboard using Power BI.
- Decision Support System.

PROJECTS

Payroll System (Fullstack)

Freelance

Apr 2024 - Oct 2024

- Designed and built a payroll system using NestJS to handle salary processing, deductions, and employee data with containerized deployment using Docker.
- Gathering requirements and cases to match clients expectations.
- Implemented business logic for salary, deductions, and rules.
- Containerized application using Docker and deployed to server environment.

ERP System for Hospital

At PT. Ilab Solusi Pratama

May 2024 - Present

- Developed a modular ERP features system supporting hospital operations.
- Maintain old legacy code and systems.
- Designed API integrations for third-party services.

Android Based Application

At PT. Ilab Solusi Pratama

Jan - June 2025

- Research and Implements MVVM architecture using Kotlin and Jetpack Compose.
- Manage data flow and UI reusable components.
- Integrate third party services including Google OAuth and Google Play Subscription.

Python Web Scrapping

At PT. Ilab Solusi Pratama

Dec 2025 - Present

- Develop OSINT website to scrap data from targeted websites using python and fast API.
- Retrieve data from websites using playwright, proxies and simulating human interaction to break through the websites bot protection.
- Try to research and implement newest web scraping tools like scrapling.

STRENGTHS AND QUALIFICATIONS

TECHNICAL SKILLS

- **Backend:** Node.js (NestJS), C# (.NET), REST API, Microservices, CQRS
- **Database:** SQL Server, PostgreSQL, MySQL, Redis

- **DevOps:** Docker, Linux, Nginx, CI/CD (basic), Containerization
- **Cloud:** AWS EC2, VPC, S3 & RDS
- **Architecture:** System Design, API Design, Authentication (JWT, OAuth)
- **Others:** Git, Bash, Debugging, Performance Optimization

SOFT SKILLS

- Critical Thinking
- Continuous learning
- Problem Solving
- Teamwork
- Communication

EDUCATION

Bachelor of Computer Science

IPB University

Aug 2018 - May 2023

- GPA 3.14/4.0
- **Relevant courses:** Data Structures, Object-Based System Development, Software Engineering, Databases Management, Data Mining, Information Retrieval, Artificial Intelligence, Smart System, Computer Vision.
- **Software Engineering:** Recognize, engineer and develop software starting from requirements analysis, design and modeling, to implementation using the program.
- **Object-Based System Development:** Studying object-based software development including objects, classes, encapsulation concepts, inheritance, polymorphism, and access modifiers. At the end of the course, we develop software based on objects.
- **Data Mining project:** Analysis of bank customer data to determine the pattern of customers who are actively paying debts and those who are not.
- **Information Retrieval project:** Create a classifier that can distinguish between spam emails and not.
- **Artificial Intelligence project:** Sudoku solver using backpropagation method, solve 1M problem without error.
- **Computer Vision project:** Machine learning apps that help to classify the species of snake based on their skin differences.
